Tune MRTRY Hyperparameter to 10 from 12* Let's do some hyperparameter tuning. We have the opportunity to reset the mtry value from 12 to 10 here, calculate and collect the MSE for comparison with other MSE values from the other models. We can also tune the number tree using some specific values.

```
# Random Forest with MTRY=10
rf_model_mtry_10 <- randomForest(state_mentalhealth_util ~ .,</pre>
                                  data=GTrend_training_set_f,
                                  mtry = 10, importance = TRUE)
print(rf_model_mtry_10)
##
## Call:
##
    randomForest(formula = state_mentalhealth_util ~ ., data = GTrend_training_set_f,
                                                                                              mtry = 10, in
